

Q2 - Applet Lifecycle

Java Source Code:

```
import java.applet.Applet;
import java.awt.Graphics;

public class LifecycleApplet extends Applet {

    public void init() {
        System.out.println("init() is invoked - Applet Initialized");
    }

    public void start() {
        System.out.println("start() is invoked - Applet Started");
    }

    public void paint(Graphics g) {
        g.drawString("Applet started.", 50, 50);
    }

    public void stop() {
        System.out.println("stop() is invoked - Applet Stopped");
    }

    public void destroy() {
        System.out.println("destroy() is invoked - Applet Destroyed");
    }
}
```

HTML File:

```
<html>
<body>
<applet code="LifecycleApplet.class" width="400" height="200">
</applet>
</body>
</html>
```

Compile / Run:

```
javac LifecycleApplet.java
appletviewer LifecycleApplet.html
```

Expected Output:

Applet started.

```
init() is invoked - Applet Initialized
start() is invoked - Applet Started
stop() is invoked - Applet Stopped
destroy() is invoked - Applet Destroyed
```
