

Q4 - Addition Calculator

Java Source Code:

```
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;

public class AdditionCalculator extends JFrame {

    JTextField num1, num2, result;
    JButton addButton;

    AdditionCalculator() {
        setTitle("Addition Calculator");
        setSize(400, 250);
        setLayout(new FlowLayout());

        add(new JLabel("Number 1:"));
        num1 = new JTextField(15);
        add(num1);

        add(new JLabel("Number 2:"));
        num2 = new JTextField(15);
        add(num2);

        addButton = new JButton("Add");
        add(addButton);

        add(new JLabel("Result:"));
        result = new JTextField(15);
        result.setEditable(false);
        add(result);

        addButton.addActionListener(new ActionListener() {
            public void actionPerformed(ActionEvent e) {
                int n1 = Integer.parseInt(num1.getText());
                int n2 = Integer.parseInt(num2.getText());
                result.setText(String.valueOf(n1 + n2));
            }
        });

        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        setVisible(true);
    }

    public static void main(String[] args) {
        new AdditionCalculator();
    }
}
```

Compile / Run:

```
javac AdditionCalculator.java  
java AdditionCalculator
```

Expected Output:

```
Number 1: 10  
Number 2: 20  
Result: 30
```
