

Q5 - Employee Salary Calculator

Java Source Code:

```
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;

public class EmployeeSalaryCalculator extends JFrame {

    JTextField id, name, basic, hra, da, gross;
    JButton calculate;

    EmployeeSalaryCalculator() {
        setTitle("Employee Salary Calculator");
        setSize(450, 400);
        setLayout(new FlowLayout());

        add(new JLabel("Employee ID:"));
        id = new JTextField(20);
        add(id);

        add(new JLabel("Employee Name:"));
        name = new JTextField(20);
        add(name);

        add(new JLabel("Basic Salary:"));
        basic = new JTextField(20);
        add(basic);

        add(new JLabel("HRA (20%):"));
        hra = new JTextField(20);
        hra.setEditable(false);
        add(hra);

        add(new JLabel("DA (10%):"));
        da = new JTextField(20);
        da.setEditable(false);
        add(da);

        add(new JLabel("Gross Salary:"));
        gross = new JTextField(20);
        gross.setEditable(false);
        add(gross);

        calculate = new JButton("Calculate");
        add(calculate);

        calculate.addActionListener(new ActionListener() {
            public void actionPerformed(ActionEvent e) {
                double basicSalary = Double.parseDouble(basic.getText());
                double hraAmount = basicSalary * 0.20;
```

```

        double daAmount = basicSalary * 0.10;
        double grossSalary = basicSalary + hraAmount + daAmount;

        hra.setText(String.valueOf(hraAmount));
        da.setText(String.valueOf(daAmount));
        gross.setText(String.valueOf(grossSalary));
    }
});

setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
setVisible(true);
}

public static void main(String[] args) {
    new EmployeeSalaryCalculator();
}
}

```

Compile / Run:

```

javac EmployeeSalaryCalculator.java
java EmployeeSalaryCalculator

```

Expected Output:

```

Employee ID: E101
Employee Name: Ravi
Basic Salary: 10000

HRA (20%): 2000
DA (10%): 1000
Gross Salary: 13000

```
